# STT Lab 1

# Kishan Ved 22110122

# 1 Introduction, Setup and Tools

#### 1.1 Overview

This lab is based on concepts of version control systems (VCS) and hands-on exercise with Git.

#### 1.2 Objectives

The objective of this lab assignment is to understand the basic concepts of version control system, setting up Git, creating a GitHub repository, push and pull code to and from the GitHub repository and setting up a pylint workflow via GitHub actions.

## 1.3 Environment Setup

- Download Git
- Sign Up on GitHub
- Install VS Code
- Configure Git with name and email

#### 1.4 Tools and Versions

• **OS**: Ubuntu Version : 22.04.5

• **Git:** Version: 2.34.1

• Code Editor: Visual Studio Code (Version 1.96.2)

• Python: Version 3.10.12 (for pylint workflow)

# 2 Methodology and Execution

#### 2.1 Procedure

- 1. Setup the environment as mentioned above.
- 2. Create a folder named CS202\_Lab1
- 3. Initialize a local Git repository
- 4. Create a README.md file
- 5. Add the file to the staging area
- 6. Commit the file (along with a commit message)
- 7. Create a new repository in GitHub named CS202\_Lab1
- 8. Link local repository to GitHub
- 9. Push changes to GitHub
- 10. Clone an existing repository
- 11. Pull changes from the exising repository
- 12. Create a python file (a.py)
- 13. Push the python file in our GitHub repository
- 14. Set up pylint workflow from GitHub actions
- 15. Resolve errors to pass the pylint check
- 16. Install PyLint extension in VS Code to resolve errors easily

# 3 Results and Analysis

Initially, the pylint checks were failing:

```
Analysing the code with pylint
   ► Run pylint $(git ls-files '*.py')
 7 ********** Module a
   a.py:20:19: C0303: Trailing whitespace (trailing-whitespace)
9 a.py:37:0: C0304: Final newline missing (missing-final-newline)
10 a.py:1:0: C0114: Missing module docstring (missing-module-docstring)
   a.py:1:0: C0103: Constant name "a" doesn't conform to UPPER_CASE naming style (invalid-name)
12 a.py:2:0: C0103: Constant name "b" doesn't conform to UPPER_CASE naming style (invalid-name)
13 a.py:4:0: C0103: Constant name "c" doesn't conform to UPPER_CASE naming style (invalid-name)
   a.py:17:4: C0103: Constant name "c" doesn't conform to UPPER_CASE naming style (invalid-name)
15 a.py:25:0: C0116: Missing function or method docstring (missing-function-docstring)
16 a.py:25:6: W0621: Redefining name 'a' from outer scope (line 1) (redefined-outer-name)
    a.py:25:8: W0621: Redefining name 'b' from outer scope (line 2) (redefined-outer-name)
    a.py:28:0: C0103: Constant name "d" doesn't conform to UPPER_CASE naming style (invalid-name)
    Your code has been rated at 4.76/10
   Error: Process completed with exit code 20.
```

Figure 7: Failing Pylint checks

I resolved all the mentioned errors. I also installed the Pylint extension in VS Code to make the process easier.

The pylint check was successful with code rating: 10/10

```
Analysing the code with pylint

Analysing the code with pylint

Run pylint $(git ls-files '*.py')

7

8

Your code has been rated at 10.00/10

10
```

Figure 8: Pylint check successful

## 4 Discussion and Conclusions

## 4.1 Challenges and lessons

I faced some issues with identifying Pylint errors. This process was streamlined after installing the Pylint extension for VS Code. I learnt that Pylint requires all variables in uppercase and arguments in snake case.

## 4.2 Summary

In this lab, I understood the basic concepts of version control system, set up Git, created a GitHub repository, pushed and pulled code to and from the GitHub repository and set up a pylint workflow via GitHub actions.
